Section 1

Text, Lists and Emphasis

Bullet Lists

Bullets and nested lists pick up the accent color.

- Top-level item with a nested list
  - Second-level item
  - Another second-level item
- Inline math renders too: $e^{i\pi} + 1 = 0$

Numbered Lists

Enumerations use the same accent color for their markers.

1. First step
2. Second step
3. Third step

Description Lists

Description lists are themed too — the term picks up the accent color.

Accent Driven by the selected faculty.

Structure Titles, bullets, and rules share one color.

Fira Sans The theme ships with the FiraSans font family.

Emphasis and Alerts

The accent color follows the faculty chosen via `\usetheme[faculty=...]`. Use alert text for warnings and accent text for emphasis.

Inline styling: **bold**, *emphasis*, `monospace`, and a hyperlink.

Blocks

Standard, alert, and example variants

Standard block

Title bar in the accent color, body in a light tint of it.

Alert block

Always red, independent of the faculty color — for critical points.

Example block

Sand accent — for analogies, asides, or worked examples.

Section 2

Color Palette

Named Colors

The full UUlm palette at a glance

Every color is available by name; `UUlmInstitute` is an alias that tracks the chosen faculty.

`UUlmRed`

`UUlmDarkBlue`

`UUlmLightBlue`

`UUlmMutedBlack`

`UUlmGreen`

`UUlmOrange`

`UUlmAccent`

`UUlmInstitute`

Section 3

Columns

Two Columns

Left column

- Columns split the frame
- Good for text beside a figure
- Or for side-by-side comparison

Right column

A block sits comfortably inside a column for highlighting a takeaway next to supporting text.

Section 4

Tables and Figures

Full-width Table

Feature	Description	Notes
Frame title rule	Rule under each frame title	Optional subtitle above it
Section page	`\AtBeginSection` divider in this deck	White on accent
Frame number	Plain number in the footer	From `footline[frame number]`
Faculty color	One command swaps the whole accent	Five presets

`L` is a left-aligned, wrapping tabularx column from the preamble

Comparison Table

	Option A	Option B
Setup	Simple	Involved
Control	Limited	Full
Verdict	Good default	For advanced use

Accent and red can be mixed inline to encode good / bad.

Figure with Caption

Figure: The label before this text uses the accent caption color.

Section 5

Links, Buttons and Notes

Buttons

A button

Self link

Buttons use the accent background with a matching border.

Footnote

Some claim.[1]

[1] The mark up there uses the accent footnote-mark color.

Section 6

Wrap-up

Conclusion

- One theme, five faculty presets via `faculty=...`
- Themed titles, lists, blocks, captions, buttons, and footnotes
- Tables, columns, and the FiraSans font ready out of the box

Swap `\usetheme[faculty=engineering]` for `medicine`, `math`, `science`, or `default` to retheme the whole deck.
